EX.NO: 10	Simulation of DNS
DATE:	

#### Aim

To simulate a Domain Name System (DNS) using User Datagram Protocol (UDP) Sockets in Java.

### Theory:

The Domain Name System (DNS) is a hierarchical decentralized naming system for computers, services, or any resource connected to the Internet or a private network. UDP is a connectionless protocol that operates at the transport layer and provides a simple interface between a network application and the Internet Protocol (IP).

#### **ALGORITHM**

#### Algorithm for DNS Server:

- Start the program.
- Initialize arrays for hosts and corresponding IP addresses.
- Create a DatagramSocket on port 1362.
- Receive a DatagramPacket from the client.
- Extract the requested hostname from the received packet.
- Check if the hostname exists in the hosts array.
- If found, send back the corresponding IP address; otherwise, send "Host Not Found" message.
- Create a response DatagramPacket with the IP address or error message.
- Send the response packet to the client.
- Close the server socket.

### **Algorithm for DNS Client:**

- Start the program.
- Create a DatagramSocket for communication.
- Get the IP address of the server from command line arguments or use localhost by default.
- Prompt user to enter a hostname.
- Convert the hostname to bytes and create a DatagramPacket to send to the server.
- Send the packet to the server.
- Receive the response packet from the server.
- Extract and display the IP address received from the server.
- Close the client socket.

## **Program**

#### **UDP DNS Server**

```
import java.io.*;
import java.net.*;
public class dnsserver
{
    private static int indexOf(String[] array, String str)
    {
        str = str.trim();
        for (int i=0; i < array.length; i++)
        {
        if (array[i].equals(str)) return i;
        }
        return -1;
    }</pre>
```

```
public static void main(String arg[])throws IOException
{
String[] hosts = {"zoho.com", "gmail.com", "google.com", "facebook.com"};
String[] ip = \{"172.28.251.59", "172.217.11.5", "172.217.11.14", "172.217.11.5", "172.217.11.14", "172.217.11.5", "172.217.11.14", "172.217.11.5", "172.217.11.14", "172.217.11.5", "172.217.11.14", "172.217.11.5", "172.217.11.14", "172.217.11.5", "172.217.11.14", "172.217.11.5", "172.217.11.14", "172.217.11.5", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.15", "172.217.11.15", "172.217.11.15", "172.217.11.15", "172.217.11.15", "172.217.11.15", "172.217.11.15", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11.14", "172.217.11", "172.217.11", "172.217.11", "172.217.11", "172.217.11", "172.217.11", "172.217.11", "172.217.11", "172.21", "172.21", "172.21", "172.21",
"31.13.71.36"}; System.out.println("Press Ctrl + C to Quit");
while (true)
{
receivedata.length);
DatagramSocket serversocket=new DatagramSocket(1362);
byte[] senddata = new byte[1021];
byte[] receivedata = new byte[1021];
DatagramPacket recvpack = new DatagramPacket(receivedata,
serversocket.receive(recvpack);
String sen = new String(recvpack.getData());
InetAddress ipaddress = recvpack.getAddress();
```

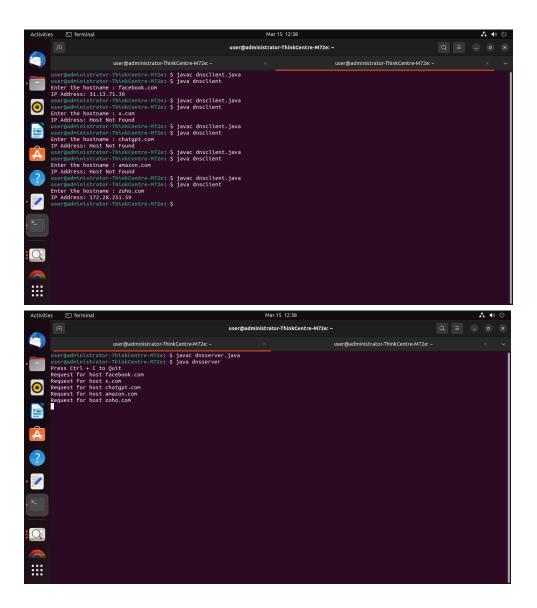

```
int port = recvpack.getPort();
String capsent;
System.out.println("Request for host " + sen);
if(indexOf (hosts, sen) != -1)
capsent = ip[indexOf (hosts, sen)];
else
capsent = "Host Not Found"; senddata = capsent.getBytes();
DatagramPacket pack = new DatagramPacket (senddata,
senddata.length,ipaddress,port);
serversocket.send(pack);
serversocket.close();
}
}
}
```

# **UDP DNS Client –**

```
import java.io.*;
import java.net.*;
public class dnsclient
{
public static void main(String args[])throws IOException
BufferedReader br = new BufferedReader(new
InputStreamReader(System.in));
DatagramSocket clientsocket = new DatagramSocket();
InetAddress ipaddress;
if (args.length == 0)
ipaddress = InetAddress.getLocalHost();
else
ipaddress = InetAddress.getByName(args[0]);
byte[] senddata = new byte[1024];
byte[] receivedata = new byte[1024];
int portaddr = 1362;
System.out.print("Enter the hostname: ");
```

```
String sentence = br.readLine();
senddata = sentence.getBytes();
DatagramPacket pack = new DatagramPacket(senddata,senddata.length,
ipaddress,portaddr);
clientsocket.send(pack);
DatagramPacket recvpack = new
DatagramPacket(receivedata,receivedata.length);
clientsocket.receive(recvpack);
String modified = new String(recvpack.getData());
System.out.println("IP Address: " + modified);
clientsocket.close();
}
}
```

# **OUTPUT**

### Conclusion

Thus the DNS application program was executed.
